# Genre Alchemy: Visualising the Intersections of Literary Worlds

- A collection of **4400** popular books suggests the growing idea of cross-genre reading habits among avid book readers.

- While **fiction** is clearly the most popular genre among readers, data suggests that it is also the genre which is the **most paired** with other complementing genres.

- **Fiction** coupled with **fantasy** was observed to have the highest intersection among the book collections.

- **Fiction, Mystery** and **Thrillers** are observed to go quite well together as well based on the data in hand.
